

LNZA Dynamic Purchasing System (DPS):

The LNZA Dynamic Purchasing System (DPS) is a procurement route that connects public sector organisations with a pre-qualified pool of expert suppliers. It is designed to support the development of net zero projects by providing access to specialist advisory services that help move projects towards investment readiness.

Launched in July 2024 by GSENZH, the DPS is open to new suppliers throughout its lifetime and is available for use by eligible public sector bodies.

How does it work for the Buyers:

-Buyers define their requirements and issue a call-off (tender) to relevant suppliers on the DPS

-Competitions are run among pre-qualified suppliers within specific service categories

-Call assessed on a Cost/Price basis, percentage of the overall score awarded for each element

Typical procurement timelines can be as short as 6-8 weeks.

Key Features

- Flexible and open: New suppliers can join at any time

- Wide-ranging services: Covers 5 broad categories and multiple specialist services
- No overall value cap: Unlike traditional frameworks
- Quality-focused entry: Suppliers must demonstrate capability, not compete on entry
- Performance-based participation: Suppliers can be excluded based on poor delivery

What do Suppliers need to apply?

- Relevant case studies (typically 1-3 per service area)
- Clear descriptions of services delivered
- Supporting evidence and references

Applications are reviewed by evaluators, who assess confidence in the supplier's ability to deliver the services. The DPS currently has 79 reputable suppliers.

Who can use the DPS?

The DPS is available to public sector organisations, particularly those working with Local Net Zero Hubs or delivering net zero-related programmes.

Why use the DPS?

- Faster, compliant route to market
- Access to a diverse pool of specialist suppliers
- Supports innovation and high-quality advisory services
